User Interview Report

Respondent Details:
Name: Ananya Sharma
Age: 21

Travel Behavior:
Travels 5–6 times per week within the city.
Common routes: College ↔ Internship ↔ Home.
Uses Google Maps, Uber/Ola, and public transport (metro/bus).

Key Preferences:
Time (reaching on time is critical)
Cost (budget constraints as a student)
Convenience (less switching between apps)

Do you switch between apps to compare prices between them?
Open to multi-step routes (metro + auto, bus + walk).
Prefers it only if it significantly reduces cost or time.
Finds planning such routes manually confusing and time-consuming.

Interest in Proposed Solution:
Would use an app that suggests cheaper and smarter routes.
Finds idea useful for daily commuting.

How much would you expect to save per trip to find this useful?
Expects to save at least ₹30–₹50 per trip.
Believes savings are meaningful over weekly/monthly travel.

Key Insights:
Users are willing to compromise convenience for savings if the process is simple and guided.
Major pain point = too many apps + unclear decisions.
Strong interest in automated route optimization.

Conclusion:

The user shows clear interest in a unified platform that simplifies decision-making while saving both time and money.
